Weight	<b>44 grams</b>	76 grams	140 grams
MSRP <i>(USD)</i>	<b>\$349</b>	\$499	\$499

# Key Points

Nearly identical specs with microphone that cost \$150 more.

Across the board, the S-Mic 3S comes without a few degrees of each spec found on other industry standard models.

The RODE NTG5 is slightly more sensitivity, but that can be matched using a clean preamp found Zoom F-series or Sound Devices MixPre recorder. Furthermore, being too sensitivity also means you could be picking up unwanted background sounds which may not have been the intended focus.

The S-Mic 3S does all this weighing up to **less than 70% what other microphones in it's class weigh.** Infact, the S-Mic 3S is the world's lightest XLR shotgun.

If you're running a boom pole all day, or just using it as an XLR camera mic, you know after a long day weigh matters to how you feel.
